DIGITAL FORENSICS WORKFLOW & DOCUMENTATION

The ByteCase Hub you buy today is the worst version you'll ever use.

Our commitment: With an active annual ByteCase Hub license, every Hub update released during that paid term is included at no extra charge - fixes, refinements, features and major versions. Renew annually to receive updates released in later terms.

THE PURCHASING CASE

Built for the examiner doing the work. ByteCase Hub organizes the documentation surrounding forensic acquisitions, verification, and analysis, helping reduce the time spent recreating records when a case is reviewed or prepared for disclosure and court.

01 CAPTURE

Structured intake, evidence details, acquisition methods, and exceptions in one case workspace.

02 PRESERVE

Saved verification results and hashes for rechecks, handoffs, and case integrity documentation.

03 REUSE

Consistent case records can support review and planned report/exhibit assembly without re-entry.

FOR SUPERVISORS, LABS AND PURCHASING

- Consistent, examiner-authored documentation across cases.
- Less manual reconstruction before technical review or disclosure.
- Clearer handoffs when a case returns months later.
- Customer-controlled local data; works alongside existing tools.

ILLUSTRATIVE TIME TEST

40 × 15 min =

10 hours / month

Illustrative; not measured.

WHAT BYTECASE HUB IS - AND IS NOT

A workflow companion, not an extraction or analysis engine. Hub does not interpret evidence, determine admissibility, replace chain-of-custody systems, or submit filings to courts. Investigative judgments, lab validation, and examiner review remain essential. Automated report assembly is planned, not available in today's pilot.

Practical next step: Run the 60-day examiner trial. Measure intake, acquisition, integrity, and handoff documentation effort before requesting a purchasing quote.

PRODUCT STATUS & ROADMAP

One product today. A separate platform ahead.

Current as of October 24, 2026 • Plans are developmental, not guaranteed release dates.

BYTECASE HUB | AVAILABLE NOW | V0.29.0 PILOT

Current product: Signed Windows pilot with local case search, status, and Intake, Evidence, Acquire, Verify, Objectives, Artifacts, Findings, and Workflow. Offline activation supports local case work. Saved cases remain readable, with supported exports after a license expires.

Not available yet in this Hub release: Notes and Hub Report. Separate standalone module builds are in pre-release preparation; Workflow and Playbook have ongoing development work.

BYTECASE HUB / DEVELOPMENT DIRECTION

NEXT / PILOT IMPROVEMENTS

More guided workflows, stronger evidence and acquisition documentation, update-license continuity, and verified backups and workstation migration.

THEN / FROM RECORDS TO COURT DELIVERABLES

Restore source-linked Notes and add examiner-reviewed report generation. Timeline, Exhibit, and Closeout remain planned Hub directions, subject to release decisions.

BYTECASE ENTERPRISE / FUTURE SEPARATE PRODUCT

Not an automatic Hub upgrade. Enterprise is a planned, separately licensed agency-level platform for shared multiuser cases, roles, examiner-approved intake queues, and ultimately supervisor visibility built from examiner workflows. Deployment model, features, pricing, and migration terms are not yet committed.

ANNUAL BYTECASE HUB LICENSE / INCLUDED UPDATES

During an active paid annual term, every Hub update released in that term is included, including major versions, at no separate fee. Updates released after the term ends require renewal. **ByteCase Enterprise** is separately licensed if released.

HOW AN AGENCY CAN EVALUATE

1. Download the signed Hub pilot and request a 60-day trial. **2.** Obtain agency approval and test with approved sample data. **3.** Request a Hub quote and review its license terms. **4.** Activate using emailed .bcreq / .bclic files; routine Hub case work remains local and offline.
